

TERMISEAL®

the termite killer

Your home faces a deadly yet silent threat everyday. One you cannot see and least expect. Termites, often mistakenly referred to as white ants, enter your home in search of their food – your furniture and woodwork. Other wood infesting pests such as Powder Post Beetles can survive in untreated wood for many years – their larvae go on chewing their way from the inside, often severely damaging wooden articles before you discover the infestation. By then it may be too late. What follows are sleepless nights and feeling of utter helplessness and despair. Why go through all this when a solution is at hand?

Termiseal® from PCI PEST CONTROL PRIVATE LIMITED, is specially formulated to combat the threat from termites and other wood boring pests. Available in a ready – to – use form, Termiseal® contains Chlorpyrifos 2% the most potent chemical against wood destroying pests available in the market today.

Features that have made Termiseal® the most popular product of its kind :

- Ready-to-use
- No mixing required
- Easy-to-use-brush it, spray it, swab it or inject it
- Effective against termites and other wood-boring pests

PREVENTIVE & CURATIVE

Early application prevents infestation and forms a chemical barrier. Destroys insects in infested areas and forms a chemical shield against further attack.
