# PROFESSIONAL PEST MANAGEMENT FOR THE HOSPITALITY INDUSTRY

It is essential for hospitality establishments to maintain hygiene and sanitation on premises for the sake of customer satisfaction and safety. In the dynamic and highly competitive market, one bad online review due to an infestation could potentially ruin a hotel's reputation. Pests are a non-negotiable offence in hotels and customer complaints can affect repeat business.

PCI will provide solutions to inspect, manage and monitor your pest problems. In consultation with you and our expert proprietary Pest Sensitivity Index™ we can create a custom Intelligent Pest Management™ program to address each establishment's specific pest issues.

Using our unique technologies this will stop the current problem and prevent future re-infestations of roaches, flies, bedbugs and rodents. All this will be in keeping with all the regulatory requirements of the industry.

Hospitality establishments have a zero tolerance to roaches; they are a major issue that needs to be addressed. They affect the brand & reputation of the establishment, carry diseases & are traditionally synonymous with pests in the consumer's mind. GoldSeal® is our premier cockroach management program that is designed with the FSSAI, AIB and HACCP guidelines in mind.

Our patented Exoroach trap uses state-of-the-art technology that is exclusive to PCI. It is virtually invisible, highly durable & has proven to bring the most severe infestation levels down to zero. It is also 100% completely pesticide free & tamper proof. It can be implemented during normal operating hours, works 24x7 and will not in any way hinder your operations or employees.

Pied Piper is our specialised rodent management system using multiple control technologies to effectively control, and prevent future infestations.

**Roban®** is an attractive rodent poison developed & manufactured in-house as the perfect product for outdoor rodent control. It is also 100% harmless to humans and pets, so there is no risk of accidental poisoning.

**Trubble Gum®** is a glue-based rodent trap that works perfectly for indoor rodent control that traps and holds the pest rodent in one place.

**Rodabox™** is a tamper-proof & lockable unit that is designed to contain Trubble Gum® traps or Roban poisons, to protect from damage & interference.

Our technicians will be on site to assess & determine the root of your problem, providing topical control and stopping the problem at its source. We also employ quick TAT for collection of rodents within the premises.

Bedbugs are relentless parasites that feed on blood. They are experts at hiding in cracks & crevices, walls, furniture & crawling out from the upholstery to feed on employees & clients. Infestations can occur in frequently visited places such as meeting rooms, offices, canteens & the lobby. BugBuster is a specialised treatment offered by PCI that ensures a systematic approach & fast relief. With 6 decades of experience under the belt there is no other company best suited for this job. Our technicians are trained to spot even the smallest of infestations & eradicate the pests through regular checks, re-treatment & provision plans to prevent re-infestations. We provide consultation to customers by our skilled experts with practical & effective suggestions on hygiene & sanitation. We also offer a 100% chemical and pesticide-free treatment option.

Pest-O-Flash is a highly attractive fly zapper and the absolute best in its class with built in safety features and durable materials for an increased life. Stylish yet functional, it comes in formats of two tubes or four tubes - in white & black, designed specifically for outdoor areas.

Spider is a glue-board based fly catcher, designed for sensitive areas such as kitchens & other food handling or processing locations. With the patented Translucent Technology™ & the wide attraction zone, the unit catches flies 30% faster than other similar machines. The glue board has a grid that complies with HACCP standards.

PCI has the most effective solutions to manage all species of flies as part of our Integrated Fly Management (IFM) program for both the internal and external areas of an establishment. We treat the problem at its source and suggest preventive measures to avoid future infestations.

The Illume flying insect control unit has been designed with a timeless art deco style that will seamlessly fit into almost any interior decor used by restaurants or bars. It offers discreet insect control for restaurant interiors. It is silent in its function of catching a myriad of insects. It is safe and hygienic.
