

PCI ARSENAL

The PCI advantage

PCI boasts a team of specialists who have the required expertise & a proven track record in management of pests. With an intensive understanding of the extent of damage pests can cause, PCI has developed in-house, an integrated program to manage pests with following qualities.

- ✓ **TAILORED SOLUTIONS**
Customised solutions based on the size and operations of the company.
- ✓ **METHODICAL TREATMENT - DETECTING PROBLEM AT THE SOURCE**
Service consisting of thorough inspections, application, monitoring & recommendations on sanitation & proofing.
- ✓ **INTERNATIONAL SAFETY STANDARDS**
Adherence to all International Food Safety Norms, including HACCP, FSSAI & AIB.
- ✓ **TRUSTED EFFICACY**
Use of latest technologies and methods for assured efficacy and a hassle-free experience.
- ✓ **RESEARCH FACILITY & KNOWLEDGE**
Being the Pioneers, PCI has over 60 years of experience in this field with a dedicated R&D team.

PROFESSIONAL PEST MANAGEMENT FOR THE PHARMACEUTICAL INDUSTRY

Pests and infestations at production facilities & research facilities hamper the work progress of pharmaceutical companies by causing damage to raw materials & contaminating product during storage & process.

Pharmaceutical companies have stringent regulatory standards to keep up with (ISO-QMS, HACCP, USFDA, etc). If the pest problem is not addressed properly it can lead to shutting down of manufacturing units. Companies that fail their audit suffer damage to brand reputation.

We at PCI provide completely customized solutions to monitor & manage your pest problems. Our team of experts will use our proprietary Pest Sensitivity Index™ methodology in conjunction with the establishment to provide a customized and truly Intelligent Pest Management™ program. Using a combination of our exclusive technologies we will document and implement traceability systems along with our products which will not only stop the current issues faced by the company but prevent any re-infestation in the future.

PIED PIPER®
RODENT MANAGEMENT

Pied Piper is our specialised rodent management system using multiple control technologies to effectively control, prevent future infestations & stops rodents affecting production or research of pharmaceutical products.

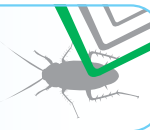

Roban® is an attractive rodent poison developed & manufactured in-house as the perfect product for outdoor rodent control. It is also 100% harmless to humans and pets, so there is no risk of accidental poisoning.

Trubble Gum® is a glue-based rodent trap that works perfectly for indoor rodent control that traps and holds the pest rodent in one place.

Rodabox™ is a tamper-proof & lockable unit that is designed to contain Trubble Gum® traps or Roban poisons, to protect from damage & interference.

GOLDSEAL®
COCKROACH MANAGEMENT

Roaches are a common and problematic pest for any production or research facility, especially pharmaceutical where it is absolutely essential that all products remain contamination free. They affect the reputation of the brand, carry diseases, are traditionally synonymous with pests in the consumer's mind and over all are a major detriment when it comes to patient care. GoldSeal® is our premier cockroach management program that is designed with the FSSAI, AIB and HACCP guidelines in mind. Our patented Exoroach trap uses state-of-the-art technology that is exclusive to PCI. It is virtually invisible, highly durable and has proven to bring the most severe infestation levels down to zero. It is also 100% completely pesticide free & tamper proof ensuring a contamination free environment for research and production of pharmaceutical products.

IFM®
FLY MANAGEMENT

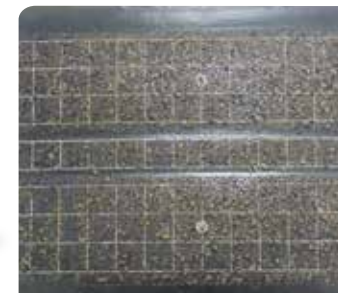

Flies are a major irritant in production or research of pharmaceuticals, their habits of regurgitation and defecation on products lead to contamination of product or hampering research and in some cases spreading diseases. PCI has the most effective solutions to manage all species of flies as part of our Integrated Fly Management (IFM) program for both the internal and external areas of an establishment. We treat the problem at its source and suggest preventive measures to avoid future infestations.

SPIDER®
ELECTRIC FLY CATCHER

Spider is a glue-board based fly catcher, designed for sensitive areas such as kitchens & other food handling or processing locations. With the patented Translucent Technology™ & the wide attraction zone, the unit catches flies 30% faster than other similar machines & is primarily the most effective technique for catching flies in clean rooms (research/manufacturing) which have zero tolerance for pests or contamination of any kind. The glue board has a grid that complies with HACCP standards.

STERIFUME®
SURFACE DISINFECTION

Constant attention is required in research facilities or production houses for pharmaceutical companies to maintain clean, microbe-free surroundings. These areas are potential reservoirs for microorganisms which are a constant source of infection & contamination. To counter this, PCI provides Sterifume, a space & surface sanitization program which helps clear surfaces of a wide spectrum of microbes while doing no damage to plastics, rubber, clothes, metal or electrical equipment. The fog is completely safe and non-irritating. The entire operation can be completed in 6 to 7 hours, compared to conventional methods that require 24 hours.

MEDIXAIR™
THE SILENT AIR STERILIZER

Along with Medixair, it provides both surface and air disinfection to ensure protection from topical and airborne microbes. Medixair is a revolutionary new germicidal product for air sterilization based on UVC light, and is perfect for ensuring hygiene of clean rooms. It effectively kills 99.99% of airborne bacteria, viruses and mould spores. It is portable and designed to function silently. It operates 24x7 and is 100% safe with no toxic residues.
